

CLEAN POWER CAPITAL

Strategic and Financial Advisory for Clean Technology and Renewables

Press Release

Clean Power Capital sees increasing demand for technology developments that enables and accelerates the transformation of clean/renewable energy production, delivery and ubiquitous demand management.

SAN FRANCISCO, Calif. (BUSINESS WIRE) – March 1, 2016 – CLEAN POWER CAPITAL (“CPC”), a strategic and financial advisory firm dedicated to Clean Technology corporate and Renewables project financing, continues to see increasing demand for clean energy solutions that meet or exceeds customer requirements, assure 100% reliability, and that are cheaper than current utility offerings, whether they be green, scalable or those that islands oneself from traditional sources. This burgeoning reality is universally recognized by leading utilities as well as commercial and industrial operators seeking to seamlessly and ubiquitously optimize or enhance returns for entities or projects through 100% renewables sourced and managed solutions.

One recent trend is the United States military. Due to security concerns of being completely reliant on traditional and large scale energy grids that are prone to vulnerability, the Department of Defense continues to seek, support and contract proven innovations that meets their operational needs of 100% renewable energy requirements, with a mentality of independent power producers, ultimately resulting in far less reliance on traditional sources at price points below traditional energy costs.

“Clean Power Capital continues to see public announcements of acquisitions and joint venture activities by many of the largest utilities in the world leaning to a myriad of technologies and production methods that are renewable energy centric. The maturity of the technology frontier in micro grid technology capabilities, and superior return profiles for early adopters, brings an awareness that utilities must adapt to this new reality. Proven islanded production of 100% renewable energy sources, with 24/7 monitoring and optimization software, is a reality that will have impact globally for underdeveloped countries globally. As it once was with early successes of wind and solar, micro grid technology and ecosystems within them, are in their infancy; delivering economically viable and clean energy solutions that we believe will grow dramatically globally over the near to mid term,” said Mark Hill, Managing Partner at Clean Power Capital.

Global and philanthropic leaders seem to agree and are pushing for faster and broader solutions which can impact populations positively and dramatically as turn key, self reliant, clean energy solutions become economically viable. For example, the Breakthrough Energy

Coalition, a think tank and philanthropic collective, believes the only way to attain reliable, affordable, carbon-free energy solutions is by developing new tools to power the world. That innovation will result from a dramatically scaled up public research pipeline linked to truly patient, flexible investments committed to developing the technologies that will create a new energy mix.

About CLEAN POWER CAPITAL:

CLEAN POWER CAPITAL (“CPC”) is a private investment bank committed to servicing clients in the accelerating Clean Technology and Renewables markets across a wide array of subsectors; from waste-to-value, energy efficiency including storage and smart grid, to alternative fuels and energy, to water and agriculture.

The firm prides itself on providing well-structured Corporate and Project financing by accessing the international finance markets to ensure the most competitive and strategic sources for debt, equity and tax equity investment on behalf of our clients. CPC specializes in finding optimum solutions in financing for both private and public companies with growth capital needs of \$5 million to over \$100 million, as well as projects and project portfolios with financing needs of \$20 million to over \$500 million. Our experienced senior banking team have provided lending services and participated in funding over \$2.1 billion for growth capital, working capital, assets, licensing, mergers & acquisitions (M&A), Initial Public Offerings (IPO), and other financing events.
